Senior Product Engineer with 9+ years of experience in platform scaling and early-stage startups.

Experience

[Senior Fullstack Engineer] [*Grubhub*] [Remote] [2024 – Present]

- Built the auto-trial subscription feature end-to-end, generating **20,000+ sign-ups** at a **75% trial-to-paid conversion rate** and **\$2.4 mil ARR**
- Led the full redesign of a **personalised offers carousel** with the design team, surfacing activity-based price reductions at tens of thousands of impressions per day
- Migrated Braze SDK to a breaking major version via progressive rollout with Datadog observability and **zero production incidents**
- Shipped subscription flow improvements for a **1M+ user platform**, collaborating 1-on-1 with designers to deliver scalable, development-friendly implementations
- Delivered features end-to-end with tests (TestCafe, React Testing Library) and conducted regular PR reviews as standard practice

[Cofounder CTO] [*nutrachedelivery.ro usercompass.tech*] [Remote] [2025 – Present]

- Built **nutrachedelivery.ro** from scratch with Next.js, Stripe, and Sentry, reaching **~1,000 orders, 115 users, and ~\$100k in transactions** in the first year
- Scaled to **~30 daily orders** through continuous UX iteration, with payments, error monitoring, and analytics integrated from day one
- Co-built **usercompass.tech**, a churn-reduction SaaS connecting user feedback to Stripe revenue data, as part of a 3-person team using BMAD agent architecture

[Frontend Software Engineer] [*urb.io*] [Remote] [2021 – 2024]

- Led a full platform rewrite following a product pivot on a B2B SaaS, modernising the Next.js architecture and growing active enterprise clients from **3 to 10**, contributing to **\$300k in additional ARR**
- Built map-heavy features end-to-end using Mapbox for an AI-powered district heating platform sold to energy companies across Europe, covering network routing, area selection, heat demand calculation, and ROI output screens
- Doubled the engineering team from **2 to 4** by running hiring interviews and onboarding new developers

[Embedded Software Engineer] [*Marelli / Hanna Instruments*] [On-site] [2017 – 2021]

- Led a team of **6 developers** on a core headlamp rendering module shipped to **millions of production vehicles**, managing scrum ceremonies, customer expectations, and technical decisions hands-on
- Promoted to lead developer within **18 months**, then to PM role synchronising dev, QA, and senior management on automotive software delivery

Education

Technical University of Cluj-Napoca *Bachelor's in Computer Science*

2015 – 2019

Technologies

Languages: TypeScript, JavaScript, HTML/CSS, Embedded C

Frameworks & Libraries: React.js, Next.js, Redux, Node.js

Tools & Platforms: Firebase, Stripe, Mapbox, Braze, Datadog, TestCafe, React Testing Library, WordPress, CI/CD

Practices: AI-assisted Development, LLM Integration, UI/UX Collaboration, Team Leadership, Project Management
